

NMEA 2000 networks are used extensively for interfacing marine electronic products. The technology is based on a robust Canbus architecture, but one bad device, cable or termination can have a detrimental effect on performance. Fault finding can be time consuming and tricky.

NAVDoctor is a portable NMEA 2000 network diagnostic tool/tester which quickly allows you to check and diagnose the NMEA 2000 network. It combines the functionality of existing NMEA 2000 display programs and test equipment into a single, cost effective, simple plug 'n play box.

It's self powered from the network and creates a local wifi point for a mobile phone, tablet or PC to connect. Once connected, you simply access functions through a web browser so there's no complicated software to install.

NAVDoctor is an essential tool for every marine electronics technician or installer as well as serious DIY boat owners and also offers the capability of printing a network health check certificate to validate an installation and improve customer service. Find out more inside...

Digital Yacht Update - August 2020 Available Now

Dear Partner

The latest edition of Digital Update (August 2020) is now available to download from [HERE](#) or click on the download option below.

There's a sneak peek on our new NAVDoctor product - a NMEA 2000 diagnostics tool available from September (download a preview from [HERE](#)) as well as interesting new navigation solutions with 3rd party products

include NKE autopilots and iPad apps.

Also new is the DST810 - a combination depth, speed and temperature transducer with an attitude sensor built in so pitch and heel can be monitored. With a NMEA 2000 interface, it connects to our wireless products like NavLink and allows apps to take advantage of all these sensors including highly accurate speed information based on boat heel. There's also a sophisticated BT interface for calibration via an app.

Lots of exciting new products and ideas from Digital Yacht. Download now.
